

Blacklist Aggregator

The Blacklist Aggregator is a Hunt Engineering Systems developed software that provides a superior authentication and validation process by downloading and merging several published terrorist watch lists into a common format.

The Blacklist Aggregator eliminates the time consuming process of vetting each visitor through a series of background checks. Through an automated process, the Blacklist Aggregator allows for rapid vetting of every single visitor as soon as a name is submitted for approval.

The Blacklist Aggregator checks names against the published government Terrorist Watch Lists and local barment lists. This system will alert the user whenever a match is found.

Blacklist Aggregator

- ✓ Fully integrates with MAX.vms – HES' credential and visitor management system
- ✓ Rapid vetting without requiring pre-registration
- ✓ Easily allows checks for terrorist watch lists
- ✓ Time saving and convenient: single search database
- ✓ Updates available without internet access

IMPROVING SECURITY //

- ✓ Verify visitors against published watch lists and local barment lists
- ✓ Brings facilities into compliance with federal regulations and mandates
- ✓ Identify known threats

The Blacklist Aggregator completely integrates with Hunt Engineering Systems' MAX.vms credential and visitor management system. MAX.vms is a customizable web-based visitor management system that helps protect people, assets, and critical infrastructure. Visitor data collected becomes an active asset by giving administrators access to queries and custom reports.
